

PUREBEAU FIBROBLAST

Lifting without surgery

FIBROBLAST is the latest technology for natural perfection.

Functional principle

The PUREBEAU FIBROBLAST handpiece produces at its tip a tiny, so-called plasma flash. This flash leaps over from the tip to the skin and lets it evaporate superficially in a tiny, micromillimeter-sized point.

This superficial point minimizes the skin in its immediate vicinity.

Further points are placed and generate a reduction grid. By the way of their arrangement, these points can equalize skin excesses.

Result: The skin area is markedly improved.

After Treatment

There are tiny scabs where the treatment has taken place. A small amount of swelling will occur and this will reduce after a few days. The healing process and sloughing of the scabs will take approximately 5-7 days depending on your circulation and healing capacity.

What else can be treated with PUREBEAU Fibroblast?

- Wrinkle smoothing eyelid tightening
- Neck, upper lip and more

Facts at a glance

Pain? Moderate to low

Risks? None known. Aftercare is given and must be followed correctly for optimum results.

The results can last up to 2 years or more depending on your ageing process and lifestyle.
